Notice of Fee Increase on January 1, 2003

If a reply to a "Notice of Allowance and Fee(s) Due" is filed in the Office on or after January 1, 2003, then the amount due will be higher than that set forth in the "Notice of Allowance and Fee(s) Due" since there will be an increase in fees effective on January 1, 2003. See Revision of Patent and Trademark Fees for Fiscal Year 2003; Final Rule, 67 Fed. Reg. 70847, 70849 (November 27, 2002).

The current fee schedule is accessible from: <http://www.uspto.gov/main/howtofees.htm>.

If the issue fee paid is the amount shown on the "Notice of Allowance and Fee(s) Due," but not the correct amount in view of the fee increase, a "Notice to Pay Balance of Issue Fee" will be mailed to applicant. In order to avoid processing delays associated with mailing of a "Notice to Pay Balance of Issue Fee," if the response to the Notice of Allowance and Fee(s) due form is to be filed on or after January 1, 2003 (or mailed with a certificate of mailing on or after January 1, 2003), the issue fee paid should be the fee that is required at the time the fee is paid. If the issue fee was previously paid, and the response to the "Notice of Allowance and Fee(s) Due" includes a request to apply a previously-paid issue fee to the issue fee now due, then the difference between the issue fee amount at the time the response is filed and the previously paid issue fee should be paid. See Manual of Patent Examining Procedure, Section 1308.01 (Eighth Edition, August 2001).

Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at (703) 305-8283.

DETAILED ACTION

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Allowable Subject Matter

Claims 1-15 are allowed.

Claims 1-15 are allowed over the prior art for at least the reason that the prior art fails to teach or reasonably suggest a diffractive optical element, wherein each diffraction grating is formed on a curved surface of a substrate, and the diffraction grating from among the at least two diffraction gratings, wherein a curvature radius of the curved surface and a curvature radius of a grating surface in a portion where a grating pitch is largest, have different signs, is the one which has the smallest grating thickness, as set forth by the claimed combination.

The most pertinent art is Ogawa (US 6,473,232, Fig. 10), wherein two diffraction gratings 23 and 24 are formed on curved surfaces 21a and one (unnamed in the Figure) parallel to 21a, respectively. The grating with the smallest grating thickness is 23 (lines 46-67, col. 10). However, in the above optical element, in the grating with the smaller thickness, 23, and at the region where the pitch is largest (section closest to the axis O), the curvature radius of the curved surface 21a and the curvature radius of the grating surface have the same sign. Cohen (US 5,117,306, Figs. 7- 8) discloses diffraction bifocal lenses wherein two diffraction gratings are accumulated upon each other. However, in the embodiment of Fig. 7, the grating, PL, in which

Art Unit: 2872

the curved surface thereof and the curved surface of the substrate upon which it is formed, have different signs, is not specified as being the one with the smallest grating thickness; and in the embodiment of Fig. 8, the second grating II is not formed on a curved surface.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dr. Leo Boutsikaris whose telephone number is 703-306-5730.
